

DANIEL COBOS

480-487-1036 | Cobos.R.Daniel@Gmail.com | linkedin.com/in/daniel-r-cobos | danielcobos.dev | github.com/cobosdaniel

SUMMARY

Full-stack software engineer with front-end depth in React, Next.js, and TypeScript, and hands-on experience building real-time, event-driven systems. Shipped a Next.js/Tailwind CSS portfolio and a live analytics dashboard integrating Twitch's OAuth and EventSub WebSocket APIs. Proven track record shipping production-quality software in Agile environments.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C/C++, Shell Script, HTML/CSS

Frameworks & Libraries: React, Next.js, Tailwind CSS, FastAPI, Flask

Tools & Platforms: MySQL, Git, REST APIs, WebSockets, EventSub, OAuth 2.0, Agile/Scrum, Linux

Cloud & Deployment: Vercel, Railway, environment-based configuration

PROJECTS

Portfolio Site — danielcobos.dev

- Built and deployed a personal portfolio site with Next.js, TypeScript, and Tailwind CSS, with CI/CD via Vercel triggering automatic production deploys on every push to main

Twitch Channel Points Tracker

Jan 2026 - Present

- Built a full-stack web application to track and analyze Twitch Channel Points redemptions in real time using FastAPI, MySQL, and React — directly integrating with the same platform infrastructure the Memberships team supports
- Integrated Twitch OAuth 2.0 and EventSub WebSocket APIs to ingest live redemption events from concurrent streams and persist them to a relational database
- Designed WebSocket services to fan out real-time updates to a live analytics dashboard, enabling per-streamer leaderboards and redemption history for creators and viewers
- Implemented database schema with deduplication logic and indexing strategies to ensure data integrity and efficient querying as event volume scales
- Deployed frontend on Vercel and backend on Railway with environment-based configuration, maintaining persistent tracking state across sessions

PROFESSIONAL EXPERIENCE

Software Engineering Intern | Kutta Technologies, Phoenix, AZ

Apr 2024 – Aug 2024

- Modified and extended legacy C++ code to implement requested functionality and resolve software defects
- Developed, tested, and debugged software within a Linux environment
- Collaborated with senior engineers through code reviews, incorporating feedback before submitting pull requests for integration
- Contributed to an Agile software development process while participating throughout the Software Development Life Cycle (SDLC)

Big John's Books Web App (Capstone Project)

Sep 2024 – May 2025

- Led a 6-person team to design and deliver a digital inventory management system using Flask, MySQL, and cloud infrastructure — shipped two weeks ahead of schedule
- Maintained ~90% story completion across 12 sprints using Taiga, keeping the team aligned on scope, velocity, and delivery milestones
- Built RESTful APIs enabling real-time inventory tracking and improved stock visibility, directly improving operational efficiency for end users

Food Safety & Quality Director | Chick-fil-A, Phoenix, AZ

Aug 2020 – Present

- Direct a 10-person team to deliver consistent quality outcomes in a high-volume, compliance-driven environment
- Forecast demand and manage logistics to maintain service levels while minimizing waste
- Improved team throughput and accountability by introducing Agile/Scrum practices to a non-technical operational environment

EDUCATION

Bachelor of Science in Software Engineering — 2025

Arizona State University | Tempe, AZ — Cum laude, GPA 3.4
